STATS ON LARGE SAMPLE SIZES PROVIDE OPPORTUNITY

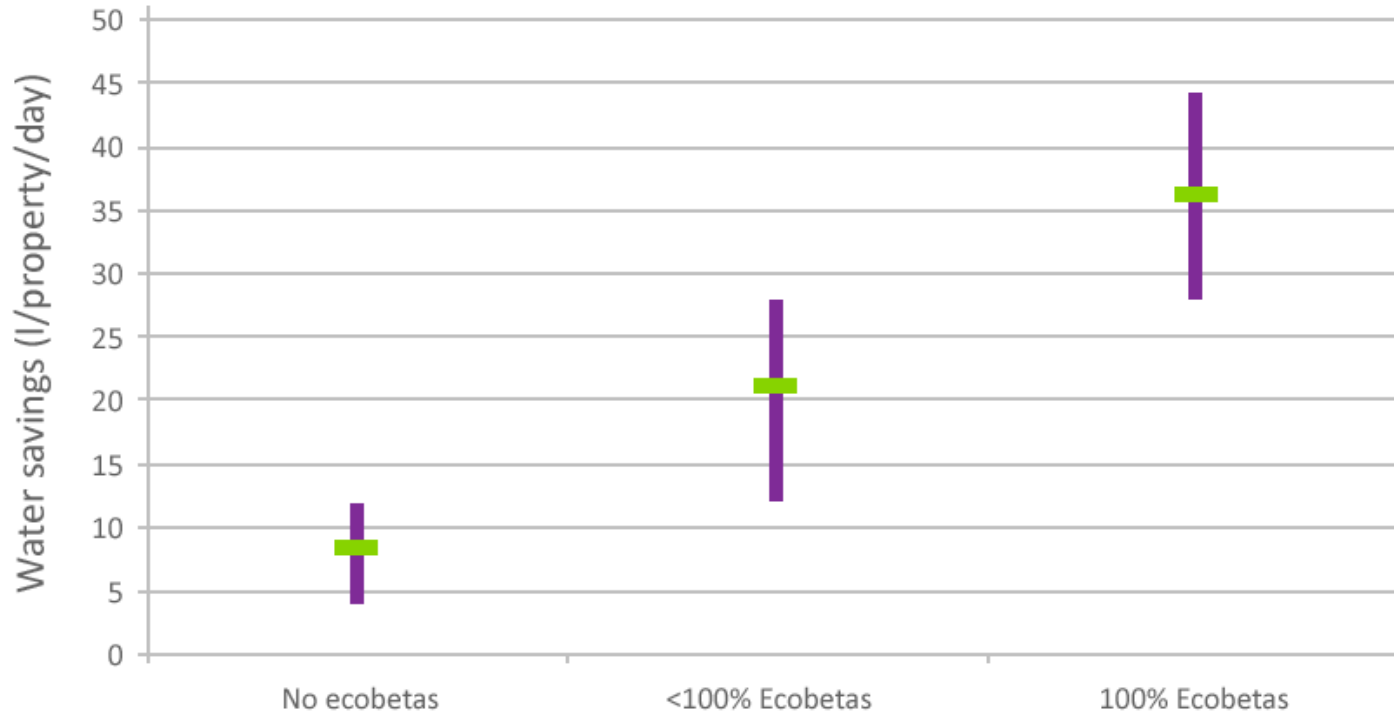

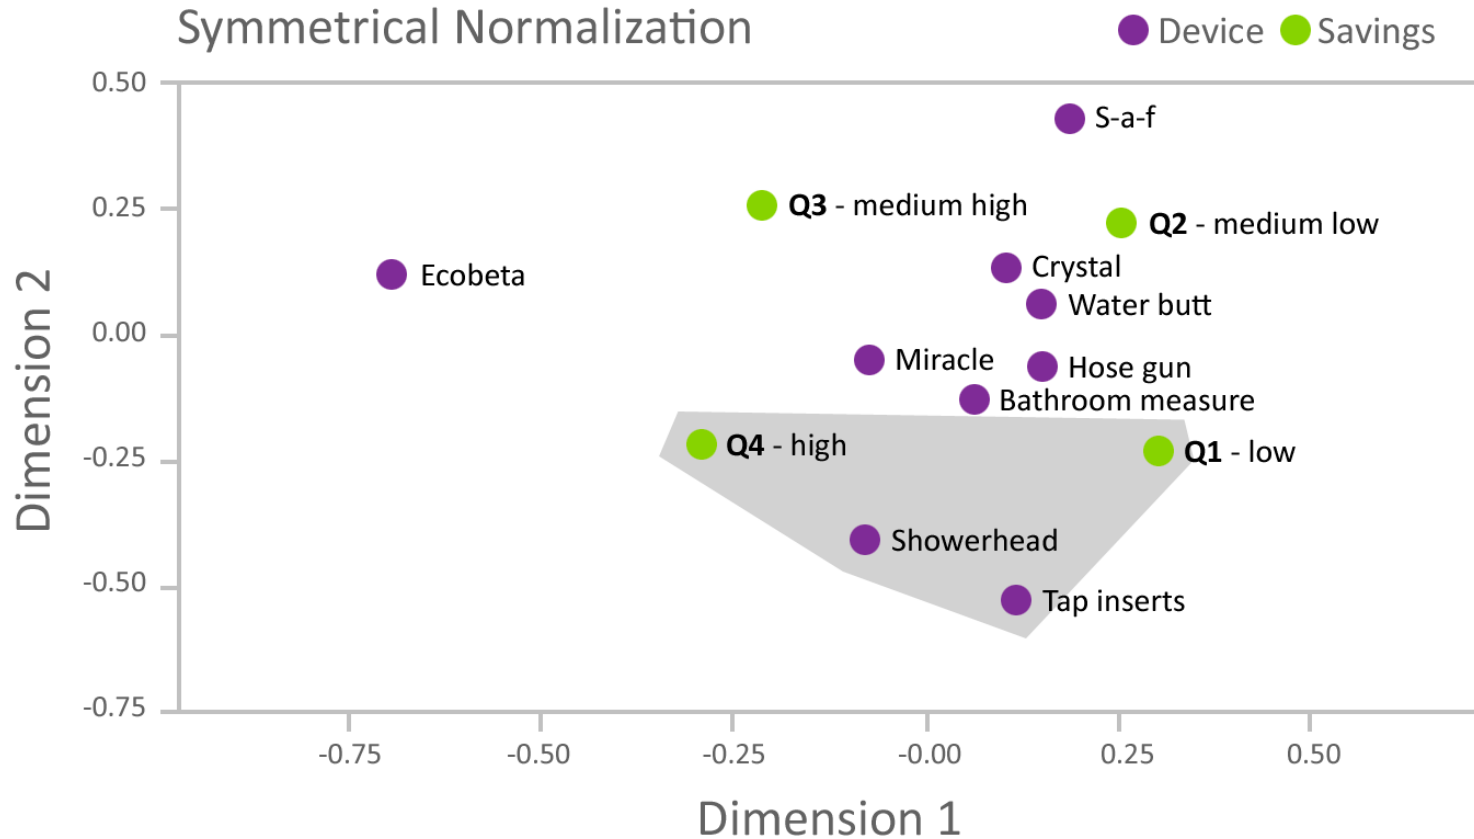

- Ecobeta: **17**
- Showerhead: **11**
- Tap inserts: **4**
- Save-A-Flush: **6**
- Miracle Tap: **4**

LITRES • PER DEVICE • PER DAY

OTHER STATISTICAL TECHNIQUES HELP

Early phase **lower** savings. More recent phase **greater** savings.

- **Ecobeta:** 17 grown to **22**
- **Save-A-Flush:** 6 grown to **8**
- **Showerhead:** 11 grown to **14**
- **Tap inserts:** 4 grown to **7**

LITRES • PER DEVICE • PER DAY

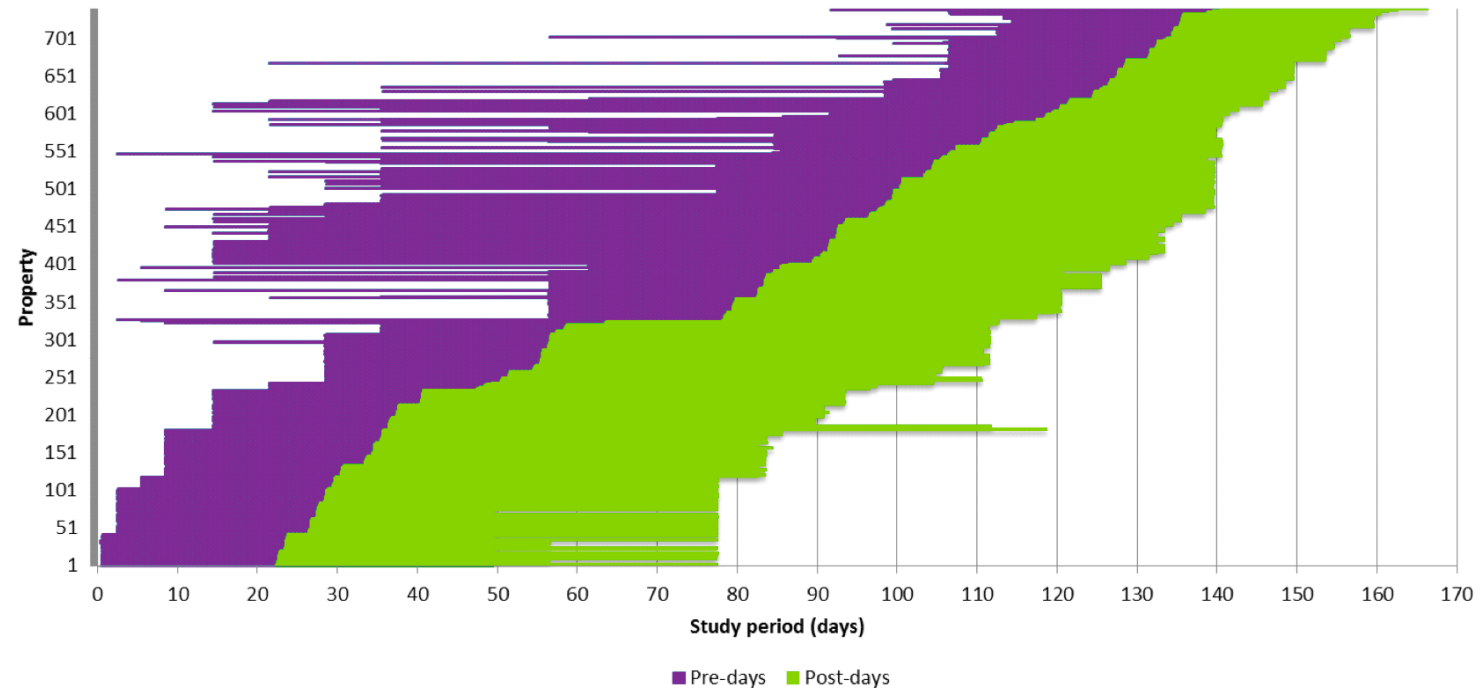

Overall Households: 19 grown to **31**

LITRES • PER PROPERTY • PER DAY

Meter billing read periods

Interventions at individual properties

Long term savings **consistent** and **sustainable** over several years

Property 1 - overall increase of 24 litres per day

Showers: 45 litres increase to 52 litres
Duration from 6 minutes to 8 minutes

External use: twice after intervention 60 litres

Bath: 1No 120 litre event after intervention

Property 2 - overall consumption decrease of 46 l /day

Showers: volume of 61 litres down to 51 litres

Toilet 1: 8.3 litres/flush down to 6.5 litres

Toilet 2: 10.5 litres/flush down to 9.5 litres

Property 3 - overall remained unchanged

Showers: volume per event reduced from 54 litres down to 47 litres, but frequency per day went up from 2.1 to 2.6 times.

- Large datasets and different stats techniques
- Opportunistic use of routinely captured data
- Micro-component analysis reveals something about how use can change

Insight

Thank you.
